

Job Description: **Manufacturing Technician**

Summary Description:

Plymouth Grating Lab, an innovative optics technology company in the South Shore/Boston area, is seeking a detail-oriented, self-motivated technician to participate in the production of precision glass components. The associate will be responsible for a variety of manufacturing procedures ranging from running processes on sophisticated equipment to performing optical measurements.

Expected Outcomes:

- Processes carried out with accuracy, repeatability, and in a timely fashion
- All observations documented thoroughly
- Measurements and procedures performed carefully and with completeness
- Responsible adherence to all procedures, including safety and cleanliness protocols

General Qualifications:

- Detail-oriented disposition
- Excellent manual dexterity and sufficient strength to handle large glass parts (up to 30 lbs)
- Commitment to following direction and established procedures
- Computer literacy, including ability to use MS Windows, Excel, and Word
- Ability to communicate with all staff professionally and clearly, both orally and in writing
- Desire to learn and take on challenging new tasks

Experience and Education:

- Experience in a precision manufacturing environment is desired
- Basic mechanical, electronics, and chemical handling skills are desired
- Clean room and optics cleaning, inspection, and handling experience is very helpful – PGL will train candidates with the right attitude in all necessary technical responsibilities
- Education: minimum of high-school diploma; 2-year/associates degree or other relevant formal training highly desired
